Why OpenCode

Why now

Journey we're going
to take together

What you need to
know before starting

WHY OPENCODE, WHY NOW

Claude Code

Cursor

GitHub Copilot

Amazon Q Developer

- One editor
- One provider
- One pricing model

WHY OPENCODE, WHY NOW

WHY OPENCODE, WHY NOW

OpenCode Go for affordable access to popular open models, or OpenCode Zen for curated, benchmarked premium models

WHY OPENCODE, WHY NOW

THE LEARNING ARC

**OPENCODE
FOUNDATIONS**

**RULES, SKILLS,
TOOLS & AGENTS**

**MCP & REAL
INTEGRATIONS**

THE LEARNING ARC

OPENCODE FOUNDATIONS

Understand OpenCode & Its
Alternatives

Explore Pricing & Access
Models

Install OpenCode Across
Platforms

Build Your First Real
Application

Work in Desktop & VS Code

Master CLI & Slash Commands

**RULES, SKILLS,
TOOLS & AGENTS**

**MCP & REAL
INTEGRATIONS**

THE LEARNING ARC

OPENCODE FOUNDATIONS

*Sections 1 to 4 get you
building with OpenCode*

RULES, SKILLS, TOOLS & AGENTS

*Make OpenCode
yours – configured,
extended, and secured*

MCP & REAL INTEGRATIONS

*Connect it to the outside
world through MCP*

Important Note

n8n Fundamentals

Sections 2 through 4 are a fast refresher

WHAT YOU DO NOT Need

No prior experience
with AI coding agents

Any paid tools to
get started

Here are few things What will help

Command line and
a code editor

AI provider API key

Important Note

n8n Familiarity

Sections 9.3 through 9.5
connect OpenCode to n8n

TOOL SETUP

OpenCode
(CLI + Desktop App)

VS Code

GitHub Account

n8n Instance
(Self-Hosted)

OpenCode isn't just another AI coding assistant
it's a genuinely open, extensible platform for building agents
that **write code**, enforce your **own rules**, use your **own skills**,
and **connect to the tools and workflows** you already run

opencode

Mastering OpenCode: AI Coding Agents, Skills, MCP & Automation

SECTION INTRODUCTION

Introduction to OpenCode

Yogesh Raheja · Thinknyx Technologies LLP

OpenCode

Section 1 – Introduction to OpenCode

Getting Started with OpenCode

Section 1 › Introduction to OpenCode

Getting Started with OpenCode

Getting Started with OpenCode

- More powerful
- More accurate
- Handles exactly the kind of code you write

Getting Started with OpenCode

Getting Started with OpenCode

Getting Started with OpenCode

Why should trying a new model mean switching your entire tool?

Shouldn't you be able to keep the workflow you already know, and just plug in whichever model you want underneath it?

Getting Started with OpenCode

OpenCode vs Other Agents

(Claude Code, Cursor, Copilot, Amazon Q)

Section 1 › Introduction to OpenCode

OpenCode vs Other Agents

Claude Code

Anthropic's terminal-based coding agent.
It's excellent but it only runs Anthropic's own Claude models

Cursor

AI-native code editor, popular with individual developers,
but it's a closed-source product with its own pricing

GitHub Copilot

Most widely used autocomplete-style assistant, deeply
integrated into VS Code and GitHub

Amazon Q Developer

AWS's coding assistant — strong if you're deep in the AWS
ecosystem, but it locks you into Amazon's own models

OpenCode vs Other Agents

Completely open-source
and it's not tied to any
single AI model

Two decisions are bundled
together, whether you like it
or not

OpenCode vs Other Agents

Pricing Model

(Free & Open-Source Core, BYOK, Go vs Zen)

Section 1 › Introduction to OpenCode

Pricing Model

AI coding agent

Assume it means signing
up for a subscription

Understanding options
here will save both
time & money

Pricing Model

**OpenCode
itself is free**

- OpenCode is completely free & open-source
- No cost to download or run
- AI model may have its own cost
- Tool $\neq$ AI model
- Same principle applies to every coding agent

Pricing Model

**Bring Your Own Key,
or "BYOK"**

- Connect your existing AI provider account
- Use your own API key
- Access models you already pay for
- OpenCode becomes your AI interface

Pricing Model

OpenCode Zen and OpenCode Go

- OpenCode's built-in provider: Zen
- Curated access to coding models
- Some models are completely free
- No Anthropic or OpenAI key required
- Start coding with a free model immediately
- Paid models available, pay-as-you-go

Pricing Model

BYOK

Use the models you already
pay for elsewhere

Zen
(free tier)

Free models, no external
keys required, great for
learning and light use

Zen
(pay-as-you-go)

When you need more powerful
models, on your terms

Go
(subscription)

Pricing Model

Note

- Free models can change over time
- Providers update what's available
- Rate limits can apply
- Connect and choose a model
- Three lanes: your own key, free Zen models, or paid Zen/Go models

How OpenCode Improves Productivity

Section 1 › Introduction to OpenCode

How OpenCode Improves Productivity

Terminal-native workflow

Works wherever you already work

Use it inside your IDE terminal

Run it from your laptop terminal

Launch the dedicated desktop app

Same OpenCode, same experience

No browser or copy-pasting required

How OpenCode Improves Productivity

**MCP & skills
extensibility**

Connect external tools & services

Teach OpenCode new skills

Go beyond writing code

Build an extensible automation platform

SECTION INTRODUCTION

Setting up OpenCode

Yogesh Raheja · Thinknyx Technologies LLP

OpenCode

Section 2 – Setting up OpenCode

OpenCode Offerings

(CLI/TUI, Desktop App, IDE Extension, Headless/Server Mode)

Section 2 › Setting up OpenCode

The CLI & TUI

Classic way to use OpenCode

opencode

Desktop App

Standalone desktop application

✓ File browsers

✓ Clickable buttons

IDE Extension

Run directly inside your code editor

OpenCode's chat and agent capabilities right in a side panel

Headless or Server mode

Not really meant for you to look at directly
it's meant for automation

OpenCode Offerings

opencode

Terminal

Speed

Desktop

Visual experience

IDE extension

Staying inside your editor

Headless/server

Automation

OpenCode Desktop App setup & walkthrough

Mastering OpenCode: AI Coding Agents, Skills, MCP & Automation

Yogesh Raheja · Thinknyx Technologies LLP

OpenCode course

Conclusion

OpenCode as a Platform

- Claude Code, Cursor & Copilot
- Free Core & BYOK
- Go vs Zen Pricing
- CLI, Desktop & VS Code
- Slash Commands

Practical automation toolkit

- Cross-Platform Monitoring Tool
- Rules, Skills & Tools
- Security Scanner & Fixer
- Permissions & Issue Resolution

Master MCP & n8n Integration

- Local Filesystem MCP
- Remote GitHub MCP
- n8n as a Tool
- Call Workflows from OpenCode
- Build Workflows Directly in n8n
